Routine Maintenance Instructions for Foot Grilles and Floor Mats

Remove grille and mat sections, noting their original locations.

Brush clean and wash grille and mat sections using mild, non-corrosive cleaning agents, suitable for aluminum, steel and nylon. Scrub as necessary and use pressurized warm water for best results.

Brush clean ledges of frame and where applicable, intermediate supports, that are normally in contact with grille sections (not applicable with floor mats). Scrape as required and remove any build-up which may impede with flush, motion-free replacement of grille sections.

For foot grilles, brush clean and vacuum bottom of pit, removing all debris and ensuring proper fit of intermediate supports, where applicable.

For deep cleaning of grilles and mats with carpet inserts, vacuum first, using a beater brush attachment. Use standard carpet cleaning products as required and clean the carpet with a hot water extraction machine, to remove soil and restore pile. Avoid using mops or other cloth material on carpet inserts.

To clean abrasive inserts, use standard household detergent and a nylon brush, and scrub as necessary to remove embedded dirt and debris, being careful not to damage the abrasive material.
