## CCS- and CCSF-993

## Installation Instructions

## Easy Connect Catch 'N' Close System

- Prevents bouncing and slamming of sliding doors
- Can be installed on both opening and closing ends of doors as narrow as 18 in [ 457 mm ]
- Cycle tested up to 150,000 times
- For up to 200 lbs . [90 kg] using CC-993 with CC-2

## Parts' List

CC-908 Side Mount Track x length (1)
Length $=2 \mathrm{x}$ door width, example:
36 in [ 914 mm ] door $=72$ in [1829 mm] track
3/8-16 K-Lock Nut
(2)
(2)
[FT21]

CC-2 Catch ' $N$ ' Close Closing Device (2) See details in instruction steps

CC-938 Hanger
Body (2) c/w wheels

$\rightarrow$
\#10 x 1-1/2"
Self-Drilling
Screws (4)
[FT5]

C-AR93 Adjustment Rod (1)

Complete CCS-993 kit illustrated. Cut-outs in track to expose components.

> \#10 x 1-1/4" Pan Head Screws (8) $[$ FT4]

## CC-101HD

Catch ' N ' Close In-Track Stops (2)
$\qquad$

## Optional Add-on Products

Complete CCSF-993 kit illustrated. Cut-outs in track and fascia to expose components.

CC-980 Snap-on Fascia x length (1)
Length = same as track length, example:
72 in [1829 mm] track $=72$ in [1829 mm] fascia

(2)

## Section View

* indicates mounting flange on CC-908 track

Optional CC-980 Snap-on Fascia, illustrated as solid black profile

Typical installation location for floor guides
For barn door applications

## Installation Steps <br> Step \#1:

Determine door size, header height, track position, and bottom clearance based on kit code ordered by using dimensions shown in detail views on previous page.

## Step \#2:

Note: If access to the ends of track is not available, steps \#3 and 4 must be completed before step \#2.
Cut CC-908 aluminum track to size if required, typically $2 x$ door width. Locate and pre-drill holes in mounting flange on track. Secure track to structural support/backing.
Note: Solid backing is required. Recommended to use $5 / 16$ in [ 7.9 mm ] diameter lag or structural bolts to secure track. Spacing is recommended to be between 12-16 in [304-406 mm] on center. Consult structural engineer to ensure adequate support and fastening.

Holes not provided. Must be located and

Step \#3:
Assemble CC-993 Catch ' N ' Close Hangers as shown below:
Fig. 1 Thread 3/8-16 K-Lock Nut [FT21] onto C-993 Easy Connect Stud with lock washer facing bolt head.
Fig. 2 Thread assembly from Fig. 1 into CC-938 Hanger Body from underside, side opposite the trigger, do not thread in fully.
Fig. 3 Completed CC-993 Hanger assembly, $2 \times$ required.

Fig. 1

Fig. 3

Step \#4:
Slide one (1) CC-993 Hanger assembly (*) with trigger facing end of track and one (1) CC-101HD In-Track Stop ( $\boldsymbol{( 1 )}$ ) into each end of track, as shown below.
Note: Leave screws on CC-101HD In-Track Stops ( $\odot$ ) loose to allow stops to slide freely within track. Rubber bumpers of each stop ( $\odot$ ) should face inward, toward middle of track.

Step \#5:
Locate center of "U" slot (dash line shown right) of C-993 Top Plate at 5 5/8 in [142.9 mm] from each edge of door or see template for dimensions from edge of door to leading edge of top plates. Mark screw hole locations or use template on page 8 and pre-drill $\varnothing 1 / 8$ in [ 3.2 mm ] holes at least $11 / 2$ in [ 38.1 mm ] deep. Secure C-993 Top Plates with (4 per hanger) \#10 x 1-1/4" Pan Head Screws [FT4]. See right.

Illustration below shows correct positioning of stops in track

Note: If door has sufficient overlap, guide channel can be recessed into door without cutting a full-length slot in door. If guide channel will be fully recessed, it is recommended to have at least $1 / 2$ in [ 12.7 mm ] door material at each end of door before start of guide channel slot.

Step \#7:
Cut C-914 aluminum guide channel to correct length as required. Drill holes in C-914 Guide Channel and pre-drill holes in door. Locate C-914 Guide Channel in slot and secure channel into place with (4) \#8 x 3/4" Pan Head Screws [FT2].

Step \#6:
Prepare C-914 Guide Channel slot in bottom of door:
1 in [ 25.4 mm ] wide in center of door, 29/32 in [ 23 mm ] deep and set back $1 / 2$ in [ 12.7 mm ] from both edges of door. Make slot as accurate as possible for secure fit and neat appearance.

## Step \#9:

Raise door, position over guide, and under hangers in track. Lift door up and engage top plate "U" slot with C-993 Easy Connect Stud. Adjust door height and plumb by using C-AR93 Adjustment Rod on C-993 Easy Connect Studs. Lock final height adjustment with k-lock nuts using $9 / 16$ in wrench.

Step \#10:
After door has been installed, position door approximately $5-10$ in [127-254 mm] away from final position at one end, shown below with left side. Push loose CC-101HD Stop, installed in step \#4, against hanger body as shown below.

Step \#11:
With CC-101HD Stop loose, slide door to final/desired position of door as shown below.
Note: Ensure that strike and trim thickness are taken into consideration for final/desired position of door.

Step \#12:
Once final position is achieved, slide door away from CC-101HD Stop. Lock CC-101HD Stop in position by tightening two cap screws on CC-101HD Stop with $3 / 16$ in allen key. CC-101HD is secured by friction fit with cone point screws.

## Step \#13:

Repeat steps \#10-12 for opposite side.
Note: Ensure that strike and trim thickness are taken into consideration for final/desired position of door.

Step \#14:
Before installing CC-2 Catch ' N ' Close Closing Devices, ensure devices are in retracted position as shown below. If not in required position, slide hook down until it locks in position.
Note: Requires significant finger pressure.

## Important Catch ' N ' Close Closing Device notes:

If doors are 200 lbs . 90 kg ] or less, ensure CC-2 Catch ' N ' Close Closing Devices are used.

## Step \#15:

Place CC-2 Catch ' $N$ ' Close Closing Device into track with leading end " $A$ " resting against upper body on CC-101HD Stops installed previously. See illustrations below:

Step \#16:
Secure CC-2 Catch ' $N$ ' Close Closing Device to track with (2) \#10 x 1-1/2" Self-Drilling Screws [FT5]. Repeat for opposite end with CC-2 Catch ' $N$ ' Close Closing Device installed in reverse as shown on front page in "Elevation View" illustration.
Note: If using impact driver to secure CC-2 Catch ' $N$ ' Close Devices, do not overtighten screws. It is recommended to pre-drill track with Ø9/64 in [ 3.6 mm ] drill bit. Secure first screw closest to CC-101HD Stop only and test system by sliding door to activate CC-2 Catch ' N ' Close. If in correct position, secure with second screw. Remove any drill fillings from inside track.

1st screw for position confirmation

## Step \#17:

Test complete Catch ' $N$ ' Close system by sliding door to both left and right to activate closing devices.

## Optional CC-980 Fascia and CC-982 End Cap Installation

## Step \#F1:

Cut CC-980 Fascia to correct length if required. Typically, fascia is same length as track previously installed.

## Step \#F2:

Lift fascia up to track and snap on as shown right.
Note: If fascia is loose and a tighter fit is desired, use a rubber mallet on inside leg of fascia to reduce gap at +/-24 in [ 610 mm ] intervals.

Step \#F3:
Install CC-982 End Cap as shown right with the supplied \#4 x 5/16" Flat Head Screws [FT29], 3 screws per end cap provided.
Note: Do not install with impact driver.

## Troubleshooting

| Issue | Solution |
| :--- | :--- |
| Chatter/noise when door is sliding | Ensure there are no aluminum shavings within track. Shavings can become embedded in <br> nylon tires and cause noise during operation. |
| Door is hard to move | Ensure guide channel secured to bottom of door is not over-tightened as this could cause <br> sides of guide channel to "pinch" guide. Remove door and check guide channel by rolling <br> guide roller in channel to ensure smooth travel. There should be little to no resistance. <br> Ensure door is not dragging on bottom of floor/guides and adjust height of <br> door as required. |
| Door rattles | Ensure locking nuts and screws on hangers are secured and not loose. |
